The 20th International Scientific Conference Globalization and its Socio-Economic Consequences

Earnings quality and accruals over company's life cycle

LUCIA MICHALKOVA

UNIVERSITY OF ZILINA, FACULTY OF OPERATION AD ECONOMICS OF TRANSPORT AND COMMUNICATIONS, DEPARTMENT OS ECONOMICS

Introduction

- right expected decline in the world economy 7.9% (OECD Economic Outlook, 2020)
- rowth of corporate insolvencies in small export-oriented economies of Central Europe 38% to 20% (Euler Hermes, 2020)
- increasing emphasis on the quality of financial statements and exposing earnings management
- referring to Hastuti, et al (2017), Chen (2016), You & Du (2019), Hribar & Yehuda (2015) profit manipulation changes with the life cycle stage

Aim of the study

The paper examines the impact of the life cycle and country specific factor on the value of discretionary accruals in the tourism sector of the Visegrad countries.

Corporate life cycle

- theories vary depending on the purpose as a managerial view or a financial view of the life cycle
- Damodaran distinguishes 6 phases of the life cycle Start-up, Young Growth, High Growth, Mature Growth, mature Stable and Decline
- Dickinson model distinguishes life cycle stages according to cash flow patterns Introduction, Growth, Maturity, Shake-out, Decline
- different financial performance in life cycle stages different space for profit manipulation

Model

$$EM_i = \mu + Country_j + Life \ cycle_k + Country \cdot Life \ cycle_{j \cdot k} + \varepsilon_{ijk}$$

- $\succ EM_i$ earnings management proxy, discretionary accruals by Modified Jones model
- $\succ Country_i$ qualitative variable {The Czech Republic, Hungary, Polans Slovakia}
- $ightharpoonup Life\ cycle_k$ qualitative variable {Introduction, Growth, Mature, Shake-out, Decline} defined by Dickinson (2011)
- $\succ Country \cdot Lifecycle_{i\cdot k}$ interaction term

Cash flow patterns and corporate life cycle

| Cash flow | Introduction | Growth | Mature | Shake-out | | Decline | | |
|-----------|--------------|--------|--------|-----------|------|---------|------|------|
| Operating | Neg. | Pos. | Pos. | Neg. | Pos. | Neg. | Neg. | Neg. |
| Investing | Neg. | Neg. | Neg. | Neg. | Pos. | Pos. | Pos. | Pos. |
| Financing | Pos. | Pos. | Neg. | Neg. | Pos. | Neg. | Pos. | Neg. |

Methods and sample

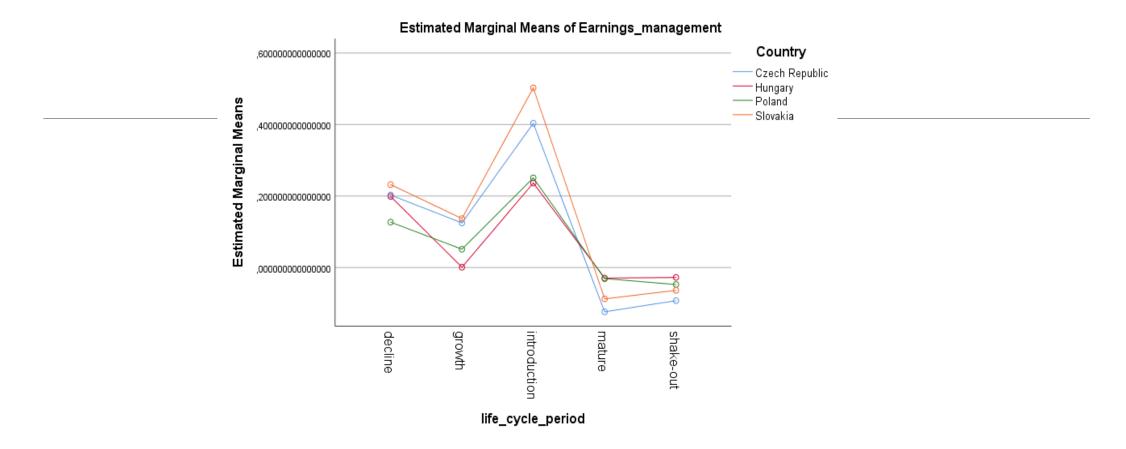

- >Two-way ANOVA with interaction
- **≻**Sample
 - ➤ Gross sample 15 295 companies
 - ➤ Net sample (without missing data and outliers) 3 650 companies
 - ➤ Analysed period 2018
 - > Criteria for the selection:
 - ➤ Turnover > 200,000 Eur
 - ➤ Country affiliation Visegrad Four
 - ➤ Nace Rev. 2 Main sector Accommodation and food services activities

Results

| Factor | Earnings management proxy (discretionary accruals) | | | | | | | |
|--------------------|--|--------|----------------|--------------|------|--|--|--|
| Country | Mean | Median | Std. Deviation | % of Total N | N | | | |
| | | | | | | | | |
| the Czech Republic | 0,0221 | 0,0470 | 0,4588 | 37,80% | 1381 | | | |
| Hungary | 0,0054 | 0,0164 | 0,1941 | 4,90% | 180 | | | |
| Poland | 0,0068 | 0,0203 | 0,2434 | 28,40% | 1035 | | | |
| Slovakia | 0,0559 | 0,0812 | 0,5548 | 28,90% | 1054 | | | |
| Life cycle stage | | | | | | | | |
| introduction | 0,4018 | 0,2889 | 0,4116 | 7,60% | 278 | | | |
| growth | 0,0993 | 0,0734 | 0,3228 | 21,00% | 768 | | | |
| mature | -0,0748 | 0,0102 | 0,2992 | 22,80% | 832 | | | |
| shake-out | -0,0686 | 0,0058 | 0,4805 | 39,00% | 1422 | | | |
| decline | 0,1984 | 0,1331 | 0,4779 | 9,60% | 350 | | | |

| Source | Type III Sum of Squares | df | Mean Square | F | Sig. | Partial Eta Squared |

a. R Squared = ,119 (Adjusted R Squared = ,114)

> the level of earnings management at different life cycle stages varies across countries

| Country | | | | |
|--------------------------|-----------|---------|--------|----------|
| significant difference | the Czech | | | |
| (post hoc tests) | Republic | Hungary | Poland | Slovakia |
| introduction - growth | H1 | H1 | H1 | H1 |
| introduction - mature | H1 | H1 | H1 | H1 |
| introduction - shake-out | H1 | H1 | H1 | H1 |
| introduction - decline | H1 | H0 | H1 | H1 |
| growth - mature | H1 | H0 | H1 | H1 |
| growth - shake-out | H1 | H0 | H1 | H1 |
| growth - decline | H0 | H1 | H0 | H0 |
| mature - shake-out | H0 | H0 | H0 | H0 |
| mature - decline | H1 | H1 | H1 | H1 |
| shake-out - decline | H1 | H1 | H1 | H1 |

Discussion

- > significant differences in earnings quality across life cycle
- ➤ low operating profit of falling and rising companies room for earning manipulation
- ➤ Hungarian subsample low difference between quality of profit if operating profit is negative
- ➤ the difference in earning quality between life cycle stages is higher than the difference between countries
- the possibility of applying the proxy life cycle in the model of discretionary accruals for companies in Central and Eastern Europe
